Welcome costumers of the qualitative IEDs

By Brother /Bakhsarof
May Allah Protect him

In the Name of Allah, the Most Beneficent, the Most Merciful.
Welcome costumers of the qualitative IEDs by "Bakhsarof"

All praises are due to Allah, and peace and blessings be upon His Messenger, Muhammad, and upon his household and companions; to proceed:

Qualitative IEDs that pass through inspection procedures undetected, "prince" Mohammed bin Nayif didn't hide that when he headed to America and met Obama after the martyrdom operation that targeted his palace, sources didn't state the reasons behind the Saudi delegation visit to Washington then, but I am confident that talks about the type of this IED and its "essences" were the main subject of this visit.

A global horror occurred in airports since Brother Omar Al-Farouq – may Allah release him from captivity – passed through several airports and stepped on a plane heading to Detroit carrying an IED similar to that carried by Abu Al-Khayir may Allah have mercy on his soul.

The attempts didn't stop until the world was surprised by these parcel bombs that triggered a global horror, and the security experts in the airports and shipping industry became disappointed since they didn't find any solution except manual inspection, which means huge losses in the shipping industry.

Days before American sources spoke about another IED coming from Yemen, and we will stand in brief with this event.

Qualitative IEDs laboratory

Before almost two years the journalist Abdelilah Shayee – may Allah relief his plight – about the Al-Qaeda organization thinking of exporting distinctive IEDs like that used by martyrdom seeker Abu Al-Khayir and Omar Al-Farouq – may Allah relief his plight –, and he spoke about the possibility of exporting it to the customers who demands it.

This time the CIA said that it was one of the of the "qualitative IEDs laboratory" when it leaked

news of "foiling” a scheme to blow up an American plane and an agent for it managed to get a “qualitative” IED that could pass through security procedures.

Here we speak about assumptions more than talking about concrete evidence about a scheme which is said to have been “foiled”, since the American intelligence didn’t give much details, also I don’t think that “Al-Qaeda organization” is concerned to comment on the issue…
The question to be presented to the CIA, then what? What did you reach?

Technical challenge

The reality that has to be absorbed by everyone is that these “qualitative” IEDs are a real dilemma and that the challenge is “technical” in the first place.

Getting an IED produced from a “laboratory” of Al-Qaeda isn’t a mentioned victory since I’m convinced that on the shelves are many of it ready for exporting to everyone who demands it, so there isn’t much that we can lose.

In return America loss is billions in the futile ways to secure the airports and Aerial shipping. Also publishing this information elevates the panic among the American people in a time it has to be said to them that it is safe after one year from the martyrdom of sheikh Osama bin laden Rahimahullah.

There two new matters in this IED: The safe mechanism of fuses, and the good wrapping of the IED.

To the Overseas

America fears from exporting the technology through two paths, the first through exporting the experts and training those specialized to manufacture these “qualitative” IEDs and maybe the CIA knows what stage the mujahidin reached and that they are serious to deliver this “technology” overseas

the second path is by exporting the martyrdom seekers and maybe if the American story was true they will find the easy procedures for a person to get a “qualitative IED” the matter is accessible and as I have told you there are many ready on the shelves waiting for costumer.

The Kentucky mixture

The Americans always try to portray matters erroneously, so they portray “Ibrahim Al-Asiri” as the only manufacturer of these IEDs, like it is similar to the “Kentucky mixture” which is only known by that elderly American.

And if I said that the CIA is aware that Al-Qaeda has means to export specialized experts all over

the world, it would be a stupid to expect that it didn't qualify many specialists in explosives through those past years, since the technology is easy and the idea is simple.

"Ibrahim Al-Asiri" if he was alive I'm sure that he would be enjoying his tea time and only supervising how things are going in the laboratories, factories, and following the indicators of production.

I understand you Americans , you didn't find anyone but him in the picture , and you Americans will remain in your illusion thinking that you are facing "an individual" whatever his name is.

From the laboratory to the airport

These specialized laboratories that prepare these IEDs, I don't care where they are and what they are, but I'm interested in that they are still working tirelessly, not influenced – Allah willing – with what is happening here and there…

But there are matters that turn upside down, noses turning red, nerves strained and eyes stay awake for the security of the airports and aerial shipping.

Not to mention the wide popular discontent from the humiliating ways of inspection and dirty methods that the security procedures descended to, these methods push the American people to wonder for the reasons of All that…

And that is from the most important gains in the war against the tyranny and oppression, and here; the American people can understand the philosophy of the conflict, and its motives and reasons.

(If the messages of reason reached to you by words we wouldn't have sent it you by airplanes), (and you won't enjoy sweet life while our people in Palestine are in the worst living).

Security for money

When America tries to became safe it has to pay more money, not just in America but in the whole world, Omar Al-Farouq headed from Amsterdam Airport in the Netherlands to Detroit in America, which means that the effort has to be international, which cost 42 billion to renew and tighten the security procedures in airports, but the aerial shipping industry is the weakest industry and tightening the procedures means severe disruption and heavy losses, also the right solution which is manual inspection which means adding human effort ;which isn't bearable since it means time ,which the shipping companies cannot afford , which losses heavily if it did that procedure, and if it didn't do it then the gap will remain, adding to all that the good camouflage of the IED which made the intelligence inspect one of the parcel bombs around 9 times searching where is the camouflaged IED in the laser printer, since there wasn't anything that draws attention.

Ye CIA

Tighten your security and inspection procedures in the airports and in the aerial shipping and don’t be lean in that since that is one of the demands of the mujahidin, and on the shelves there are many IEDs that will be given to everyone and the mujahidin won’t monopolize this technology as you monopolize your technology and inventions.

Your brother,
Bakhsarof
From the Land of faith and wisdom

Greetings from your brethren
